

BED BUG TREATMENT

GO GREEN EFFECTIVELY

High Performance & Minimum Risk

EcoRaider[®]

EcoRaider[®] Bio-Insecticide

Highly Efficacious

- ▶ Fast acting, high mortality, high performance
- ▶ Field proven uncompromising efficacy
- ▶ Outperforming traditional pesticides
- ▶ Immediately cuts down biting incidence
- ▶ Kills all bed bug stages inclusively

Green & Natural Ingredients

- ▶ Minimum risk and low environmental impact
- ▶ Minimum prepping and no vacating
- ▶ No signal word and no warning
- ▶ Pets and children friendly
- ▶ Use in all environments, even sensitive accounts

Extended Residual Control

- ▶ Lab reported 14-day Residual Activity
- ▶ Extended control on newly-hatched
- ▶ Continually cuts down biting incidence
- ▶ Complimentary with heat and steam
- ▶ Reduces call backs & revisits

Highly Versatile

- ▶ Low-odor and non-staining
- ▶ Use on all furnishing including mattress
- ▶ Use alone or in conjunction with other methods
- ▶ Return rooms back to service quickly
- ▶ IPM program compatible

USE IN ALL ENVIRONMENTS, EVEN SENSITIVE ONES

"Sensitive" accounts can often be difficult to treat efficiently. Because EcoRaider[®] is low-risk, low-odor and a non-staining formula, it can be applied anywhere. For use in schools, daycares and any other sensitive environments. No prior notification is necessary. Your "sensitive" accounts can be treated effectively with a green, botanical product.

Your Tool for Bed Bug Jobs!

Direct Spray Mortality¹

- ▶ 80% - 90% control within 1 hour.
- ▶ Kills all bed bug stages: adults, nymphs and eggs.
- ▶ Sure kill with 100% mortality.
- ▶ No compromising on resistant populations

Dry Residual Mortality²

- ▶ Proven 14 days residual activity.
- ▶ 97.5% mortality after 5 min exposure on 14-day dried residual.
- ▶ More than just a contact killer and it is green!

1, 2: Data provided by Rutgers University.

Bed Bug Reduction in Apartment Complex³

USDS IR4 field study in housing building proven:

- ▶ Similar initial control results as Temprid.
- ▶ Similar bed bug count reduction at each observation period.
- ▶ Overall comparable performance as Temprid in controlling bed bugs.
- ▶ "Most advantageous in sensitive environments."

3. Data provided by USDA IR-4 Pesticide Program

Uncompromising Efficacy

The only bio-insecticide that kills 100% of bed bugs.
The best product of all that caused highest egg mortality.

– Potential of Essential Oil-Based Pesticide and Detergent for Bed Bug Control,
Entomological Society of America, *Journal of Economic Entomology*, 2014, Vol.107, No.6

Research findings from Rutgers University show comparable efficacy to many of the leading pesticides on the market. EcoRaider matches or exceeds traditional pesticides in kill efficacy for adults, nymphs and eggs. Additionally, EcoRaider demonstrated up to 2 weeks of residual control of bed bugs.

- ▶ Efficacy of 11 products compared in lab testing (9 naturals & 2 traditionals)
- ▶ EcoRaider, the most effective bio-insecticide against bed bugs
- ▶ Outstanding efficacy comparable to some of the leading pesticides
- ▶ Superior egg mortality outperforming all other products

EFFECTIVE EVEN ON PESTICIDE RESISTANT BED BUG POPULATIONS!

Bed Bugs Have Built Resistance:

“Given the prevalence of pyrethroid resistance in field populations, resistance to pyrethroid/neonicotinoid combination products is a concern, especially considering the diverse toxicological defenses inherent in this insect...”

— University of Kentucky Study, January 2014

EcoRaider® Overcomes Resistance:

EcoRaider® is a botanical based bio-insecticide that attacks receptors that do not exist in vertebrates. It does not contain any synthetic compounds that bed bugs have demonstrated resistance to. Therefore EcoRaider® can be a standalone treatment or part of a rotation program to control resistant bed bug strains while avoiding further resistance problem.

FIELD PROVE PERFORMANCE!

Testimonial:

“We were using conventional chemical products – we tried many things and none were getting it under control and we were treating every two weeks. Once we started using EcoRaider we saw a difference immediately...I’d say within a few weeks we saw a drastic reduction in the bed bug population. We haven’t seen a bed bug in the shelter itself in months – at this point we are spot treating every two weeks with EcoRaider and it’s working incredibly.”

— Michele Cruzat, Bed Bug Operations Manager, Eden Advanced Pest Technologies, Seattle, WA

EASY TO USE!

How to use

Usage: 1 gallon per 1000 sqft by spray.
Where to use: surface, joints, edges, seams and crack & crevices of furniture and structures including mattresses, bed frames, couches, chairs, cabinets...

How Often to use

For preventative treatment: once a month.
For light infestations: every other week or as needed.
For heavy infestations: once a week or as needed.
Visit: www.ecoraiderpmp.com/support for more detail.

Is My Bed Bug Treatment Effective?

Study Shows How Feeding Availability Helps Bed Bugs in Detoxing

Rutgers University studied the impact of blood feeding to the effectiveness of insecticides and discovered that the effect of post-treatment feeding on bed bug mortality varied among different insecticides.

“The increased tolerance in large bed bug nymphs and adult males to insecticides after feeding suggests the role of feeding in stimulating detoxification enzymes responsible for insecticide resistance.”

In natural environments, bed bugs have daily access to hosts after they are exposed to insecticides. A post-treatment feeding significantly reduced bed bug mortality.

— Reference: *Posttreatment Feeding Affects Mortality of Bed Bugs (Hemiptera: Cimicidae) Exposed to Insecticides*, Narinderpal S. et al., Dept of Entomology, Rutgers University, *Journal of Economic Entomology*, Oct., 2015

EcoRaider[®]

Fast, Effective, Lasting and Green

www.ecoraiderpmp.com · info@ecoraiderpmp.com · Tel: (201) 751 0011

Is My Bed Bug Treatment Effective?

The study started with two bed bugs field strains, Indy strain and Bayonne strain, directly treated with selected pesticides. Their initial mortality after 24 hours is shown on the left for each pesticide.

The surviving bed bugs were then split into two groups — blood feeding and non-fed. The impact of blood feeding to the effectiveness of insecticides was evaluated. The result showed that the effect of post-treatment feeding on bed bug mortality varied among different insecticides.

“EcoRaider acted as a relatively fast-acting insecticide.”
— Narinderpal S. et al., Rutgers University, Journal of Economic Entomology, Oct., 2015

The Rutgers study indicates:

- ▶ Post-treatment blood feeding has significant impact on the performance of many insecticides.
- ▶ A recent blood meal increases levels of detoxifying enzymes to become more resistant.
- ▶ PMPs should choose a right tool that is less affected by detoxification.
- ▶ Post-treatment does not affect EcoRaider’s final mortality.
- ▶ EcoRaider shows the highest in final mortality among all tested in fed and non-fed groups.

Premium Natural Perimeter Ant Control

EcoRaider® is a botanical-based, broad spectrum bio-insecticide. It provides an effective natural solution for perimeter ant control, that delivers both immediate mortality and extended residual against trailing ants. Research by Purdue University shows that EcoRaider® offers a number of key benefits useful for pest management professionals. EcoRaider® is ideal for use in and around anywhere ants are found without restriction.

“EcoRaider® immediately killed all ants that were present on the trail and prevented any new ants from utilizing the trail ... EcoRaider® is effective for up to 4 weeks, potentially longer, depending on the treated substrate and other factors such as environmental conditions.”

— Purdue University Field Evaluation of EcoRaider® against Odorous House Ants, 2015

EcoRaider® Go GREEN Effectively !

We were using conventional chemical products – we tried many things and none were getting it under control and we were treating every two weeks. Once we started using EcoRaider we saw a difference immediately...I'd say within a few weeks we saw a drastic reduction in the bed bug population. We haven't seen a bed bug in the shelter itself in months – at this point we are spot treating every two weeks with EcoRaider and it's working incredibly.

— Michele Cruzat, *Bed Bug Operations Manager, Eden Advanced Pest Technologies, Seattle*

We use EcoRaider as part of our heat treatment services for bed bugs. We spray EcoRaider before applying heat to immediately knock down the bed bug populations...EcoRaider has helped us increase our percent control and reduce our bed bug callbacks.

— Bill Hastings, *Director of Special Services, Rose Pest Solutions, Chicago*

I.V Termite & Pest Control

We use the product mainly in apartment buildings and homes, and have had good success so far. We are able to apply it directly to mattresses, drapes, furniture and it is the only product we can use on walls. It gets right to where the bed bugs live. Using a minimum risk product appeals to residential customers concerned about their family or pet's exposure to traditional pesticides and that helps give them peace of mind.

—Bill Smale, *president of IV Termite & Pest Control, El Centro, CA*

EcoRaider was superior to other products because it had so many more advantages. It doesn't leave stains and we use it on everything: wood, plastic, any surface. With EcoRaider, we use it in hospitals, clinics, facilities, offices, apartment buildings, homes, everywhere. EcoRaider works everywhere we use it. It's very good for sensitive areas and that's very important because you don't want to treat a clinic or hospital knowing you'll leave a dangerous residue on their premises.

— Arnold Castro, *President, Ecology Environmental Professional, New York*

An Effective, Green Solution for **MINIMUM-RISK** Bed Bug Control

Designing and implementing bed bug management programs in commercial accounts, including senior housing, health-care facilities and multi-family apartment units, is not an easy task. There are multiple variables a pest professional must consider when selecting products and treatment techniques to eliminate bed bugs in these types of accounts.

In sensitive accounts, variables include the medical condition of residents/patients, access to infested units, clean and sterile room environments, and restrictions on pesticide usage.

In multi-family apartments PMPs have to consider the highly mobile nature of bed bugs (which move from unit to unit), the transitory nature of residents and guests coming and going, and access to units to perform inspections and treatments.

Any of these factors can dramatically influence how pest management professionals approach bed bug management in sensitive accounts.

A COSTLY PEST

While bed bugs may not pose the health threat that cockroaches, stinging insects and rodents do to residents and patients, their mobility and the annoying bites they leave behind make them an unwanted pest in sensitive accounts.

Recently a jury awarded a North Carolina woman \$100,000 in compensation for bed bug bites and the accompanying stress she experienced after staying in a bed bug-infested room at national hotel chain. The woman awoke with welts on her arms

and hands after spending one night in the hotel.

The jury found the hotel negligent for failing to check that the room was free of bed bugs before renting it to her. The property had previously experienced and treated for bed bugs.

This case demonstrates the significant economic impact bed bugs can have on commercial facilities. From costly litigation and brand damage to loss of revenue when apartments go unrented, bed bugs are not only annoying but they are costly.

AN EFFECTIVE TOOL

Pest management professionals are inundated with bed bug technology. From heat treatments and traditional pesticides to physical barriers and bed bug-resistant pajamas, the arsenal of bed bug products PMPs have at their disposal seems to grow on a daily basis.

Bill Hastings, director of specialty services for Rose Pest Solutions in the Windy City of Chicago, the nation's number one bed bug infested city, services numerous sensitive accounts

A pest management professional spraying the back of a couch with EcoRaider to protect it from bed bugs. EcoRaider is a minimum-risk, green solution for bed bug control.

and apartment/condominium complexes for bed bugs and is always on the lookout for products that will help Rose win the fight against this pervasive pest.

When a sales representative dropped off several bottles of EcoRaider® Bed Bug Killer spray, a botanical bio-insecticide, Hastings was skeptical.

"I gave it to several of our technicians to use and their feedback was, 'We want more of this stuff,'

which is usually a sign it works," says Hastings. "I went out and tested it myself and had bed bugs dying four to six seconds after coming in contact with the product which impressed me."

The positive results resulted in EcoRaider becoming a protocol product for Rose Pest Solutions, which means the company's dozen bed bug teams now have it as part of their standard bed bug toolbox.

The product — which is EPA exempt — provides Rose Pest Solutions' technicians with flexibility since it can be applied to mattresses, couches, drapes and furniture as a complement to the company's other bed bug service options.

"It acts quickly and fits into our integrated approach to bed bug management that includes heat and conventional pesticide treatments," says Hastings. "We take it with us on our inspection visits and if we spot bed bugs can we apply it to stop the spread of

Two pest management professionals inspect and treat a mattress with EcoRaider to eliminate and prevent a bed bug infestation.

The Ecology Environmental Pest Control team prepares to fight a New York bed bug infestation using EcoRaider.

the infestation and provide the customer with some immediate emotional relief.”

Hastings says EcoRaider is particularly effective in assisted living facilities where moving patients can be problematic due to their medical conditions.

“Conventional treatments typically require moving the patient out of the room overnight and that isn’t always easy or even possible,” says Hastings. “With EcoRaider we can make the application and the patient can be back in the room later that day. It relieves stress and hassle for both the patient and facility.”

Michele Cruzat, bed bug operations manager for Eden Advanced Pest Technologies, a Rentokil company, agrees that using EcoRaider in group housing has paid big dividends. Her team used EcoRaider to

control bed bugs in a local shelter.

“Using EcoRaider made a huge difference for us,” she said. “We were using conventional chemical products — we tried many things and none were getting it under control and we were treating every two weeks. Once we started using EcoRaider we saw a difference immediately.

“I’d say within a few weeks we saw a drastic reduction in the bed bug population. We haven’t seen a bed bug in the shelter itself in months — at this point we are spot treating every two weeks with EcoRaider and it’s working incredibly.”

EcoRaider also has proven its mettle in multi-unit housing complexes, which Chicago has plenty to spare. Hastings points to a six-unit apartment building that had a bed bug infestation so

severe, the owner wouldn’t enter the building.

With infestations in each unit — more than 1,000 bed bugs were discovered roaming around one apartment — Rose applied EcoRaider and used vacuums to knockdown the population during weekly service calls. A heat treatment was then performed to eradicate the infestation.

“We are able to apply EcoRaider while setting up the heat treatment equipment and achieve a greater degree of control,” says Hastings. “The product is a nice complement to heat treatments because we can apply it on the same day and it doesn’t interfere with the efficacy of the heat.”

MINIMUM RISK, MAXIMUM SUCCESS

In Southern California, Bill Smale, president of IV Termite & Pest Control in El Centro, says EcoRaider’s flexible label make it a valuable tool in the company’s bed bug treatment protocols.

“We use the product mainly in apartment buildings and homes, and have had good success so far,” says Smale. “We are able to apply it directly to mattresses, drapes, furniture and it is the only product we can use on walls. It gets right to where the

bed bugs live.”

Smale uses the minimum risk product exclusively in residential settings where it’s favored by his customers, he says.

“Using a minimum risk product appeals to residential customers concerned about their family or pet’s exposure to traditional pesticides and that helps give them peace of mind,” says Smale.

PMP Arnold Castro, owner of Ecology Environmental Professionals in New York City, also uses the product because of its environmentally friendly label. “I focus on eco-friendly products and EcoRaider was superior to other products because it had so many more advantages than other standard products,” he said. “It doesn’t leave stains and we use it on everything: wood, plastic, any surface.”

“There are other products that are effective and they leave stains or they might damage a surface. We find EcoRaider doesn’t do that so it’s a big difference from other products,” he added. “You’re using a product with EcoRaider that’s eco-friendly and yes you’re leaving a residue but this is all natural.”

EcoRaider also fits nicely into Rose Pest Solutions’ preventive bed bug programs, which Hastings sees growing in popularity as bed bug pressure in and around Chicago continues to increase.

“With commercial accounts it is all about the budget,” says Hastings. “Preventative programs appeal to apartment and condominium management companies since units that go unrented because of a bed bug infestation yield zero revenue and can cost a company its profit for the year.” ♦

Seattle PMP Michele Cruzat of Eden Advanced Pest Technologies prepares to use EcoRaider on a bed bug job.
