Best Practices when using Vendetta® Plus Cockroach Gel Bait

Use Vendetta Plus as part of an IPM program

Use Vendetta Plus as part of an Integrated Pest Management (IPM) program. Rotation of Vendetta Plus with other cockroach baits is recommended over the course of the year to delay the development of additional forms of behavioral resistance. Additionally, application of an insect growth regulator such as NyGuard® IGR is an excellent supplemental treatment option.

Bait placement

For best results focus bait placements in or near cracks and crevices and near German Cockroach harborages.

Do not apply Vendetta Plus:

- To areas that have been recently sprayed with insecticide to prevent the bait from becoming repellent – cross-contamination of the bait can negatively impact its palatability
- To greasy or dusty surfaces – the bait will not adhere as well as it will to clean surfaces
- In locations that are routinely washed – the bait will be removed by washing
- In locations where routine-cleaning operations may transfer diluted bait to food or food preparation surfaces
- In or on electrical equipment where a possibility of shock hazard exists

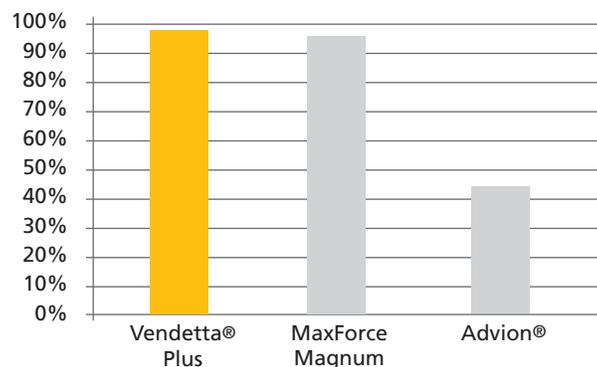

Avoid placement on fabrics

Avoid placing Vendetta Plus on textiles, fabrics or carpets since it may stain some absorbent materials.
