

For inconspicuous fly control in public areas, our decorative systems are powerful units that work hard and look great:

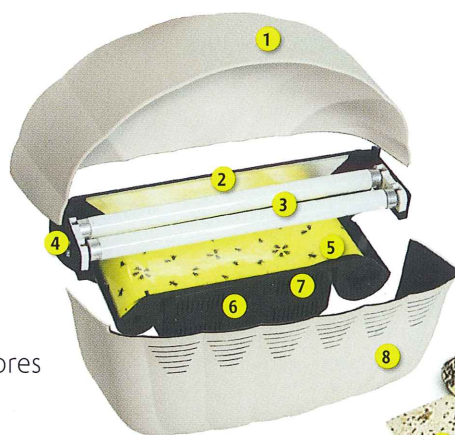

INSECT INN ULTRA I & II™

Customers will see a beautiful scone and soft light. They'll never realize it is actually a highly effective commercial fly control system. In bars and other areas where fruit is cut or stored, the Insect Inn Ultra I & II provide effective control against swarming gnats and fruit flies.

The patented auto-advance cartridge lasts 60 days and will capture thousands of flies. Available in one-or-two lamp models, this wall mounted unit meets all USDA and FDA guidelines.

Competitor's Glueboard 9
Insect Inn Capture Cartridge 10
Holds up to 10 times the capacity
of a standard glueboard.
12 feet of continuously
moving trapping area.

Real world experience with the Insect Inn Ultra:

Flies are a constant problem in our restaurants, coming in through service doors, the drive up window and the customer entrance. We have tried several types and brands of fly traps, but nothing really worked until we saw the Paracclipse devices at the National Restaurant Show.

We decided to try the Insect Inn Ultra model in several of our restaurants, and the results have been terrific. Customers no longer complain about flies and the health inspectors are no longer "on our case."
