

## Service Pro.net's Growth Leads to a New Corporate Head Office in Columbus, Ohio

COLUMBUS, Ohio, (eReleases) – Service Pro.net, developers of ServSuite, one of the most popular and powerful pest control software solutions around (<http://www.theservicepro.net/>), is proud to announce an upgrade to the Print to Mail Services in their pest control software program.

Traditionally, their services allowed you to export a text file which can then be sent to a print house for printing & processing. They have now improved this feature by allowing you to review the documents in PDF format and uploading that exact image to the print house. This makes the whole print to mail process easier and faster for you as the end user.

Pest control companies spend thousands of dollars per year on labor and toner in order to process their own documents. This does not include the savings they miss out on reduced-rate postage due to insufficient sorting. With this service you don't have to worry about buying toner, folding forms, stuffing the envelope, or going to the post office. No more hassle in getting statements, invoices or renewals printed, stuffed and mailed to your customers within 24 hours. IT'S ALL AUTOMATED!
