*When applied as a foliar spray, Subdue Maxx must be tank-mixed with another non-group 4 fungicide with activity on downy mildew (i.e. Protect DF or other products with FRAC Group #11, 33, 21 or 43). Subdue Maxx may also be applied alone as a drench for control of downy mildew diseases.

**Protect DF at 1-2 lbs/100 gal. may be included in the rotation alone or in combination with any of the other fungicides. Other Mancozeb products can be substituted.

Alternate systemic fungicides with other effective fungicides that have translaminar activity on a 14-day interval. Shorten the spray interval to 7 days at the first sign of disease or when conditions are conducive to disease development. Adding an adjuvant with spreading/penetrating type properties may help improve spray coverage and performance on woody ornamentals or crops with waxy leaves.

Greenhouse Rotation

Crop	Week (post-transplant)	Recommended Treatment	FRAC #	Fungicide	Application Rates	Target Diseases
4-inch pot or smaller	1	Drench	4	Subdue Maxx	0.5 - 1.0 fl. oz./100 gal.	Downy mildew <i>Pythium, Phytophthora</i>
