

Fruit Fly Trap,

These apple-shaped traps attract fruit flies using a proprietary food based, non-toxic, non-staining lure. Once the flies enter the trap, they cannot escape to continue breeding and multiplying. Traps should be placed anywhere fruit flies are seen. Common breeding areas for fruit flies are around produce sections, near garbage storage areas, and near sinks and dishwashers. Each trap lasts for 45 days.

SKU	Case Qty	UPC	SCC	Dimensions
