## Geese Intrusion & Damage!

Before

After

After

Before using Goose Scram, this property was decimated by geese, the grass was thin and sparse, and goose droppings were everywhere, including on the pathways. After applying Goose Scram Pro, the geese have not returned, the grass is lush, and the residents can now use this beautiful area as intended. Thanks EPIC for a great product!  
Top Green Lawn Care, St. Paul, MN

### A Green Solution to stop Geese Intrusion & Damage

EPIC represents that these products qualify for exemption from EPA registration under Section 25 (b) of FIFRA and have not been registered by the EPA.

### How EPIC Can Help

To manage geese damage to tolerable levels, while conserving the regional goose population and natural environment, EPIC has developed **Goose Scram™**, a propriety all natural granular repellent that won't harm animals or the environment. It naturally deters the geese from the protected area keeping geese away for up to 25 days. Continued re-application will train the geese to find other areas to frequent, graze in and nest.

ITEM# 5922

**What you should know...** The U.S. Fish & Wildlife Service reported 3.5 million resident Canada geese in the United States. The Atlantic flyway resident Canada goose populations exceed 1 million and have increased 2 percent per year during the last 10 years. The main factor contributing to their dramatic population growth is their tendency to nest in urban and suburban areas, where the geese have ideal habitat with few predators and where hunting cannot be used to control the population. The damage in public areas caused by geese have reportedly cost up to \$29-to \$34.00 per goose in park & recreation budgets creating a high demand for an all natural repellent that is safe and easy to use. Other problems caused by Canada geese densities are:

- overgrazing of grass • accumulation of droppings & feathers in public use areas • attacks on humans by geese during nesting season or by food-aggressive birds • and the fouling of reservoirs and swimming areas where fecal matter carries bacteria.
