

Big commercial, industrial and open outdoor spaces call for insect control that is up to the challenge of eliminating flies and mosquitos on a large scale.

TERMINATOR™

The Paraclipse Terminator is a portable appliance for commercial and industrial applications. The Terminator's ingenious design utilizes two lamps and reflectors to attract flies to both sides of the unit. It can be used free-standing or suspended from the ceiling.

A wall-mounted model is also available.

The Terminator's high-volume, 60-day cartridge system traps many times more flies than glueboard units.
