

## XLURE RTU ...Seriously 'USER FRIENDLY' :

1. Pull the traps you'll need for the day and put them in your service vehicle:

*Note: There are 6 traps & hangers per re-sealable foil bag; (There are 4 bags per box for a total of 24 traps/box.)*

*XLure RTU Pheromone Traps Do Not Require Refrigeration, so there's no need to pack XLure in your vehicle's cooler 😊.*

2. Upon arrival to account, remove the traps & hangers from the re-sealable foil bags.

*Note: Re-seal the bag when you've removed the traps you need so any traps not being used will stay fresh & protected for the next account.*

3. Record the installation date in the designated area on the lower panel of trap.

*Note: There is no need to hand write the insects being monitored on the trap because XLure RTU Traps are printed on the side panel with the insects that are attracted to that trap. Account auditors can easily verify which insects the trap is pre-baited to attract.*

4. Insert the hanger & install trap. Refer to label on foil bag for trap placement recommendations.

### Insects Attracted:
