Genus® | ORBIT JET

A high performance Insect Light Trap providing premium flying insect control in wet and wash down areas.

What makes the Genus® Orbit Jet the professional's choice?

SEALED ELECTRICAL COMPONENTS

You probably know about the Genus® Orbit high performance insect light trap, but did you know it is also available in a 'Jet Proof' version?

The Genus® Orbit Jet is Ingress Protection rated at 6 for dust and 5 for water, making it ideal for use in dusty and wet process environments whilst still providing the same great attractant UV light output to deliver rapid fly catch.

The Genus® Orbit Jet has sealed electronics and lamps that allow continuous operation even during wash-down, providing high performance fly control in wet process areas such as slaughter houses, meat and fish processing, bottling plants and other traditionally difficult environments. However, it retains the patented Translucent Technology™ shell of the standard Genus® Orbit that transmits and scatters the attractant UV light, providing an increased "target" for flying insects and significantly increasing its rate of fly catch.

Just like the standard Genus® Orbit, ease of service is designed in - with a full opening hinged door for rapid access for glue board replacement, and the smooth outer cover that is snag-free for simple no-nonsense cleaning. **For some customers this is the only insect light trap suitable for fly control at their facilities.**

The Genus® Orbit Jet gives you the advantage of proven technology to meet demanding fly control problems and expands the range of customers that can be provided with fly control services.

GENUS® ORBIT JET - THE PROFESSIONAL'S CHOICE

for rapid fly control in dusty, wet and wash down areas!
