Millipedes

Darkling beetles

Hide beetles

Mildew and fungus

Nibor-D: APPLICATION

Apply into cracks, crevices and void areas as a dust application for listed insect control.

Apply as a liquid application for residual control into cracks, crevices, void and spot applications.

Apply as a mop solution for supplemental control of cockroaches and ants in conjunction with moisture control.

Apply to kill and control mildew and fungus on surfaces.

Nibor-D: APPLICATION

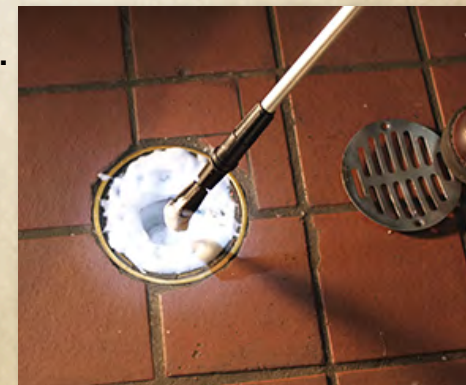

In commercial kitchens

To kill drain flies, cockroaches and other commercial kitchen pests, apply using a TrueTech® foamer with Profoam® Platinum foaming agent:

- in drains
- in cracks and crevices
- in garbage cans & dumpsters
- around plumbing penetrations
- in wall voids
- around and under equipment & cabinets

Controlling small flies in drains:

- Nibor-D coats the organic debris areas where flies breed and develop.
- It makes the food material toxic to the larvae.
- It kills the larvae and stops the continuing life cycle that produces adult populations.
