attraction

TECHNOLOGY AT WORK

The Genus® Orbit uses patented Translucent Technology™ (TT™) to disperse UV light, providing a wider fly attraction zone which significantly increases its fly catch rate.

Tests carried out under exacting laboratory conditions show that the UV output from the Genus® Orbit is **2.4 times greater** than that of a conventional non-TT™ unit. In fly catch tests, the Genus® Orbit easily outperformed a similar wattage competitor's unit, and was also shown to be **25% faster** at catching flies than even a competitor 75 Watt unit*.

This means **maximum fly control** from each unit as well as requiring fewer units for the same amount of fly catch resulting in **lower running costs** and quicker, more efficient servicing.

Like all Genus® ILTs the Genus® Orbit has been designed with ease of servicing in mind. The unit's fully opening hinged door provides rapid access for replacement of the Brandenburg Universal Glue Board.

Genus® Orbit Jet is an IP65 rated jet proof version which **minimizes downtime in wash down areas** and Genus® Orbit Innova incorporates **unique germicidal properties** for clean critical areas.

GENUS® ORBIT - THE PROFESSIONAL'S CHOICE
for rapid fly control in the most demanding
environments!
