

J.T. EATON SELLS FRESH, CLEAN, APPETIZING BAITS AT AN AFFORDABLE PRICE BECAUSE...

RATS AND MICE LOVE FRESH BAIT.

For Best Results:

Wear waterproof gloves when handling bait. Odors that we carry on our hands and clothing can be easily transferred to bait, making it less likely to be consumed. Store your bait away from other pesticides and chemical odors. Baits can also absorb odors from these and other products.

Rodent Habits:

Rats usually travel about 50 to 350 feet for food and water depending on availability, and mice travel about 15 to 30 feet.

Place tamper-resistant bait stations for rats 15 to 30 feet apart or every 8 to 16 feet apart for mice. Always place your bait stations along the walls where rodents run. J.T. EATON has multiple types of bait to kill rats and mice:

- Original BAIT BLOCK® First Generation Anticoagulant Rodenticide with Diphacinone.
- NECTUS™ Soft Bait 2G Second Generation Rodenticide™ and BAIT BLOCK® 2G Second Generation Rodenticide™ with Bromodialone.
- TOP GUN™ Single Feed Neurological Rodenticide with Bromethalin.
