VOLE SCRAM™

PROFESSIONAL

Vole Scram Professional is an organic, granular repellent used to reduce and eliminate Voles from lawn, turf and infested beds. Vole Scram Pro will safely and naturally stop vole infestation when used as directed.

- **Apply Vole Scram** with a broadcast spreader using the settings below or apply by hand with scoop in beds, mulch or rough grass. **Voles are predominately active under snow covering during winter months.** Early September - early October, apply a 20 foot band to the perimeter of the property where voles are nesting during the summer months. This will help reduce voles from entering the property.

Directions For Northern Snowfall Regions:

- **First Application** (*Late October After Irrigation Is Off*) Apply to areas that have repeated winter vole infestation each year.
- **Second Application** (*November 14 Days After first application*) Re-apply to the same areas prior to snowfall (Voles problems seem to be heaviest in areas where snow drifting occurs).
- **Third Application** (*Early Spring to Late Winter*) Apply immediately after snow melt.

Directions For Midwest & Southern Regions:

- **Apply 2 applications, 2 weeks apart, to areas that are showing vole damage.** Repeat again 30 days after 2nd application.

Voles are active throughout the year but cause the most damage in winter. Most effective preventative measure is applying Vole Scram Professional in late fall, early winter before snow cover.

Recommended Spreader Settings will give 1 lb per 600 sq feet
 1 Bucket protects approx. 13,200 square feet

SPREADER SETTINGS:	
Earthway Broadcast	29
EZ Broadcast Republic	19
Lesco	22
Quaker Broadcast	18
Red Devil	20
