

# CUPBOARD-TO-CURB CONTROL WITH TANDEM INSECTICIDE

Controlling all the different pests that threaten your customers' properties can seem like a daunting task. To provide cupboard-to-curb protection for more than 90 pests, rely on **Tandem® insecticide** from Syngenta Professional Pest Management for quick and efficient control throughout your customers' homes.

PMPs can view the full product label and detailed application instructions at [www.SyngentaPMP.com/Tandem](http://www.SyngentaPMP.com/Tandem).

## Application Tips

This diagram highlights the flexible use pattern that Tandem offers you and your technicians as you treat a customer's home. Explore the numbers located throughout the house to learn how Tandem can be used in these locations.

### KITCHEN

- 1. Door** – Ants can trail around doors and windows, in cabinets and behind or under refrigerators, sinks and stoves. Apply as a spot, crack-and-crevice and/or void treatment to ant trails around these areas.
- 2. Cabinets** – Use Tandem as a spot or crack-and-crevice treatment in cupboards, shelving and storage areas to control pantry pests such as cockroaches, saw-toothed grained beetles, confused flour beetles, red flour beetles and cigarette beetles.
- 3. Stove** – In addition to applying Tandem behind and under residential kitchen appliances such as stoves, refrigerators and sinks, Tandem is also approved for use in commercial food-handling establishments, in which food is held, processed, prepared or served. (See product label.)

### LIVING ROOM

- 4. Furniture** – Tandem can be applied as a spot, crack-and-crevice and/or void treatment to corners, storage areas, closets, doors, windows, cabinets and behind or under furniture to control spiders, cockroaches and other crawling insects.

### BEDROOM

- 5. Headboard** – For control of bed bugs, apply as a spot, crack-and-crevice or void treatment behind attached headboards, baseboards, mirrors and picture frames, as well as around moldings, door frames, window frames, shelving and edges of carpet or other floor coverings. Do not use on bed linens, bed frames, mattresses, box springs, or other areas where human contact is common.

Researchers at Rutgers University<sup>1</sup> have found that an Integrated Pest Management (IPM) approach can be an effective way to control bed bugs. For example, significant bed bug reduction can occur when a steam application is directed at bed bugs found on mattresses, box springs, bed frames and sofas, and then supplemented with a chemical application to labeled areas.

<sup>1</sup> Wang, C., Singh, N. and Cooper, R. Field Evaluation of Three Sprays against the Bed Bug (PRO13801). Department of Entomology, Rutgers University, October 2013.

### FOR LIFE UNINTERRUPTED™

In the State of New York, Tandem may only be applied for indoor uses.

Please check with your state or local Extension Service to ensure registration status.** For Life Uninterrupted™, iCAP™, Tandem®, the Alliance Frame, the Purpose Icon and the Syngenta logo are trademarks of a Syngenta Group Company. Syngenta Customer Center: 1-866-SYNGENT(A) (796-4368).

### ATTIC

- 6. Attic** – Flying insects such as mosquitoes, wasps and flies can inhabit attics, crawl spaces and other areas indoors, as well as in and around garages and storage sheds outside. Tandem can be applied in these spaces to provide control and protection from these insects.

### ON THE SIDE OF THE HOUSE

- 7. Side of house** – Tandem can be applied as a perimeter band around a house.

### PATIO

- 8. Patio** – To withstand temperature extremes and various weather conditions when applied outdoors, Tandem features the power of iCAP™ technology. This proprietary innovation developed by Syngenta protects the formulation of Tandem from harsh environmental factors. With microcaps of multiple sizes that release over time, Tandem provides immediate as well as residual control for up to three months.

### LAWN

- 9. Flowers/Shrubs** – The systemic action of Tandem makes it an ideal solution to control honeydew producers, such as aphids and whiteflies, and maintain outdoor areas where turf and ornamentals are grown.
- 10. Grass** – Tandem offers Pest Management Professionals (PMPs) a full turf-application label so that they only have to carry one product to control more than 90 pests indoors and outdoors.
- 11. Dog house** – To control nuisance fleas and ticks, apply Tandem to kennels, yards and other areas where pets may frequent. Ensure animals and people cannot access treated areas until the spray deposit has dried.

Choose Tandem so you can apply in more places, effectively control more pests and quickly get your customers' lives back to normal. **Contact your local sales representative for more information.**
