SEEK OUT THE RAT

A Integrated Snap Trap is secured with an innovative removable plug system that keeps the rodent from leveraging off of the snap trap as well as easily removed and cleaned.

The EZ Snap Seeker two color indicator zip tie allows you to safely engage the trap. When the trap goes off, the yellow disappears into the box, letting you know when the trap has been tripped.

C Removable baffling walls create a commitment wall to push the rodent's head to the trigger zone of the snap trap. The walls can also be used in such a way that the rodent can see through the system.

E Force flows the rodent into the station, the cored out entry allows the rodent's head to be in the box while their feet are on the existing surface, giving the rodent a sense of safety to enter the box.

D Push lock design uses the VM Products' universal key.

B To force flow the rodent to the trigger via the commitment wall, place your attractant on the back wall so the scent will flow through.

DIMENSIONS: 6 7/8" X 11 3/8" X 4 5/8"
100% recycled injection molded plastic

Two slots on the bottom allow for zip ties (either vertically or horizontally) to secure to rodent runways (pipes, trees or rafters), giving you the flexibility to meet **any situation head on!**

The EZ Snap Seeker from the rodent's point of view. The rodent can see completely through to the other side of the box, giving a sense of safety to enter the station.
