

Quality Pheromones and Trapping Systems

Insects Limited, Inc. researches, tests, develops, manufactures, and distributes quality pheromones and trapping systems for food infesting insects to a global marketplace with a focus on the statement above. At our core, Insects Limited focuses on bringing **Science, Education, and Innovation to the Stored Product Industry.**

Warehouse Beetle/Khapra Beetle NoSurvivor Kit (IL-264)

Product Description

The Warehouse Beetle/Khapra Beetle NoSurvivor Kit is designed to attract and trap Warehouse Beetle, *Trogoderma variabile* and Khapra Beetle, *Trogoderma granarium* and other *Trogoderma* species. The kit includes 10 NoSurvivor™ Hanging Traps and 10 pheromone Bullet Lures™ for both the Warehouse Beetles and Khapra Beetles.

The Warehouse Beetle/Khapra Beetle NoSurvivor Kit (IL-264) features Insect Limited's signature pheromone Bullet Lures™ that attract *Trogoderma* food beetles such as the Warehouse beetle, (*Trogoderma variabile*), Khapra beetle, (*Trogoderma granarium*) as well as (*Trogoderma glabrum*) and (*Trogoderma inclusum*) with a controlled release of pheromone over 3 months.

Male beetles of these species are attracted to the lure and are readily stuck in the glue when paired with the NoSurvivor™ trapping system.

These traps can easily be hung throughout living spaces, food processing plants, warehouses or storage rooms. Insects that are attracted to the lure are readily stuck in the glue upon entering the trap.

How This Product Can Help You

This Warehouse/Khapra Beetle NoSurvivor Kit pairs the science of insect biology to the technology of a trapping system to assist you with the task of monitoring for these pests in your environment. In an Integrated Pest Management program, monitoring can ultimately help you reduce pest numbers. When paired with a trapping system, the lures do this by:

- Telling you if the beetles are present
- Indicating where they are coming from
- Finally telling you whether the control measures (E.g. removal of the infested product, increased sanitation, freezing, etc.) that you have taken are working or not

What to Expect

When you open this kit box, you will find the 10 traps folded together, and stacked along with 10 individually packaged Bullet Lures and an Instruction Sheet of:

- How to place the lure into the trap
- Where to place the traps
- When to replace the traps

The traps will need to be first pulled apart and then folded into place by hand, according to the instructions on the trap itself.

Each pheromone lure is individually packaged to keep them fresh until you are ready to place them into a trap. When you are ready to use this product, the lures should be removed from their packaging and placed on their sides into the center of bottom sticky area in each trap.

The traps are then ready to be placed out in areas where beetles are being seen to begin monitoring for male beetles that are attracted to the female sex pheromone. These traps will give you the information that you need to reduce or remove your beetle issue.
