

Maxforce Quantum - Revolutionary Ant Control

Maxforce Quantum represents new technology in ant baiting, completely changing the playing field for Canadian Pest Management Professionals in their efforts to control ants. Bayer Environmental Science will introduce this revolutionary product in early 2013.

Maxforce Quantum contains a low concentration of the active ingredient imidacloprid (.03%) that triggers the Maxforce Domino Effect™ killing the colony's brood and queen(s). Quantum has a texture that has a consistency similar to honey or syrup and remains moist and palatable from one service interval to the next.

Maxforce Quantum controls most major ant species (see label) and can be applied as a crack and crevice treatment or in bait stations.

Maxforce Quantum's unique non-drying formulation is highly attractive to ants and remains moist for up to three months due to Bayer's innovative bait matrix technology. Ants are drawn to the moisture-rich droplets to feed where the bait is easily consumed. The fluid nature of Quantum combined with excellent delayed mortality allows the ants to collect bait as a liquid and return repeatedly to the colony, where the bait is rapidly spread throughout the colony, killing other workers, larvae and even the queen(s).

Maxforce Quantum also controls ants fast. An initial surge of ant activity may be seen as the ants are attracted to the bait, but within three to seven days of the treatment there is noticeable reduction in ant activity. Colony elimination is usually within weeks depending on the pest species and the size of the nests.

MAXFORCE QUANTUM PERFORMANCE*		
Species	Visible reduction	Complete control
Pharaoh's ants (<i>Monomorium pharaonis</i>)	3 to 7 days	1 to 2 weeks
Ghost ants (<i>Tapinoma melanocephalum</i>)	3 to 7 days	6 weeks
Black garden ants (<i>Lasius niger</i>)	7 days	2 to 3 weeks

Maxforce Quantum Ant Bait will be available in a 120g bottle. A case of Maxforce Quantum will contain 12 bottles and 120 free bait stations.
