

**kness**  
Pest Defense

Your best defense.™

**PRO GRADE**  
PERFORMANCE

# MAKES PERFECT SENSE.

✓ **Trap Diversity**

With our attachments the same sensor works on all your snap traps, cage traps, multi-rodent traps, and bait stations.

✓ **Long Battery Life**

Up to 3 years battery life on one 9v battery.

✓ **Weather-sealed Enclosure**

Sturdy, sealed shell that keeps the electronics safe from the abuse of pests, wet crawl spaces and the outside elements.

## **KritterSense**™ REMOTE MONITORING SYSTEM

Technology is most valuable when you don't have to worry about it. Introducing the KritterSense™ remote monitoring system. Our simple, easy to use system has been designed to fit all of your Kness Pest Defense traps and alerts you when the trap is triggered, bait expires and other pest activity!

# KritterSense™

## REMOTE MONITORING SYSTEM

### HOW IT WORKS

- On-board motion sensor determines where the pest activity is taking place.
- Sure-fire trigger system monitors the trap's state and the motion sensor notifies you of trap activity.
- Trap activity data is received by the KritterSense Gateway (hub) and sent to the KritterSense Console (online portal).
- Notifications are received on your digital device, allowing you to take action when, and where, needed.
- Useful reports containing key capture data are generated including: number of devices, success rates, location of animal trapped, time the animal was trapped, bait data, and more!

Whether you own a pest control or wildlife control company, KritterSense's variety of attachments makes checking traps and bait stations quick and easy - increasing your efficiency and saving you time.
